Exploring Business Ethics

Exploring Business Ethics Background and Topic: How Can Businesses Help the Environment?

Background Information: This section provides competitors with context on how businesses can positively impact the environment through sustainable practices. Competitors should review this information before completing the Exploring Business Ethics competition using the provided topic on the following page.

Environmental issues like climate change and energy use have long been contentious and divisive topics in American society. In fact, there seems to be only one thing we can all agree on: No one can agree on anything!

However, a recent climate and energy survey from Pew Research Center found there is actually something most Americans seem to agree on. Roughly 70% of Americans believe that businesses are not doing enough to help the environment and reduce the effects of climate change.

This public sentiment comes at a time when many businesses may feel disincentivized to invest in eco-friendly practices. Economic uncertainty permeates throughout the global economy, regulatory agencies and policies are being curtailed in the United States, and powerful interest groups continue to influence public policy and opinion.

In the face of all these obstacles, is it beneficial—or even possible—for businesses to embrace sustainability?

This decision will ultimately fall to the current (and future) business leaders of America. And while public opinion may be cynical and the economic and political environment may be formidable, professionals can still adopt frameworks to help them incorporate responsible and sustainable decision-making.

A good place to start is with ethics. Ethics are the basic principles (such as integrity, transparency, and trust) that govern your behavior. In the business world, ethics are essential to navigating issues ranging from employee conflicts to corporate sustainability practices. The framework or set of standards professionals use to handle these bigger-picture issues is sometimes referred to as Environmental, Social, and Governance (ESG).

Businesses don't have to be market leaders in renewable energy or major power players in Washington to make a positive impact on the environment. A positive impact might be as small as switching to cloud storage or double-sided printing. If professionals incorporate ethical principles (like accountability and viability) and frameworks (like ESG) into their organizations' vision and processes, every business can play a role in making our planet a more harmonious, hopeful, and healthier place.

Middle School Topic

Car company Geo Motors has just announced its newest car model: The Geo Pulse. The Pulse is an electric vehicle (EV) that features all the latest technology, including a battery that allows the Pulse to last longer on the road than any other EV.

Geo Motors proudly markets the Pulse as a “zero emissions vehicle” since it’s powered only by electricity and doesn’t rely on carbon-emitting gasoline or diesel-fuel. The company also claims the Pulse is “the most eco-friendly car in the world.”

However, an investigative report reveals that the Geo Pulse—while still an impressive vehicle—is not nearly as eco-friendly as Geo Motors claims.

The report explains that several key components of the car (like its battery) are manufactured in a very energy-consuming and carbon-intensive process at Geo Motors’ factories. Furthermore, the mining methods used to extract the battery minerals resulted in widespread deforestation and habitat destruction. The report also found that some of the advanced features of the car greatly increase the car’s energy consumption.

After the report is released, Geo Motors faces criticism for branding the Pulse as a “zero emissions vehicle” that is “the most eco-friendly car in the world.” Company executives admit they are still working on more efficient methods to produce and power their EVs. But in the meantime, they say, they are standing by their marketing campaign because the Geo Pulse is still technically “zero emissions,” as the car itself does not directly emit carbon dioxide.

But what do *you* think the company should do? How should a business balance success with protecting the environment?
